

VENTILATED COVER WITH PROTECTIVE COVER IN CLAY OR CEMENT ROOF TILES

WOODEN SUPPORT

Para. 1

Slanting wooden slab.

Para. 2

Phenolic multi-layer supporting strips: height cm width cm, attached using CD-10 nails.

Para. 3

Vapour retarder in **NORDBAR** breathable bituminous membrane with a weight of 500 g/m² produced with polyester non-woven fabric soaked in a polymer distilled bituminous compound refined on both faces with a special polypropylene fabric, laid with overlap between the canvases secured on to the wooden slab, or attached using strongly bituminous adhesive emulsion.

Para. 4

Insulating panels cm thick in closed cell sintered XPS light laid between the supporting strips of the roof tile support strips properly placed alongside each other and well levelled.

Para. 5

Ventilation chamber + insect trap net.

Para. 6

Phenolic multi-layer.

Para. 7

Self-adhesive safety waterproof membrane **SELFBASE POL MINERAL SUBTILE 4000** (BPE elastoplastomer polymer bituminous membrane reinforced with spunbound polyester non-woven fabric).

Special polymers add thermal-adhesive power to the waterproofing mass on the lower face.

The waterproofing mix of the upper face allows for heat coming from solar rays, to be transferred quickly.

The thermal-adhesive waterproofing mass allows for the dry product to be laid and is ideal on structures and supports where the use of an open flame is not recommended.

Lay the rolls on the installation surface dry; make side overlaps of 10 cm and butt overlaps of 15 cm.

Remove the non-stick film. Roll the surfaces and especially the joins, to help the membrane stick.

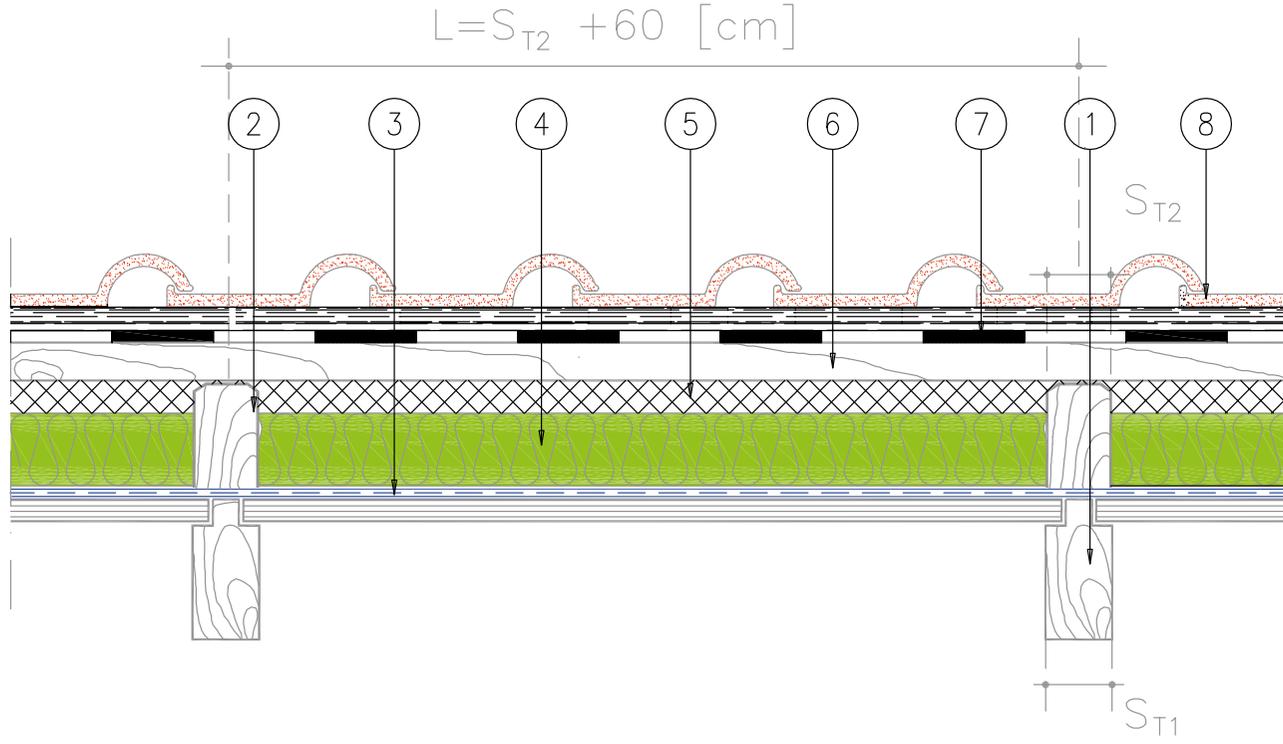

If applying to vertical surfaces or steep supports, apply specific mechanical attachments on the butt of the canvas, then sealed with the butt join.

Para. 8

Sealing protective roof tile cover type dimensions cm x cm.

VENTILATED COVER WITH PROTECTIVE COVER IN CLAY OR CEMENT ROOF TILES

WOODEN SUPPORT

1. Wooden loft
2. Phenolic multi-layer supporting strips
3. NORDBAR breathable vapour retarder
4. Heat insulator
5. Insect trap net
6. Phenolic multi-layer
7. Selfbase Pol 4000 self-adhesive mineral membrane
8. Sealing protective roof tile cover
